

SCIENCE SEMINAR

Thursday, January 17

Carson Taylor Hall room 322

Evan Norris

Senior Physics Major at Louisiana Tech

“What are Research Experiences for Undergraduates and How to Find One”

Research Experiences for Undergraduates (REUs) allow for first-hand exposure to research and its execution in a manner that is not standard within the university setting. For that reason, REUs are considered an integral part of undergraduate STEM education. We will discuss the application process for REUs, how to write personal statements and the benefits of participation. I will discuss my own REU experience to give the audience an idea of what the experience is like. Afterwards, a Q&A session will be held to address specific concerns and questions.

Come at 3:30pm for refreshments, speaker at 4:00pm
