

SCIENCE SEMINAR

Thursday, February 14

Carson Taylor Hall room 322

The Mystery of Matter: “UNRULY ELEMENTS”

2019 marks the International Year of the Periodic Table - 150 years since it was first developed. This week we will air a documentary depicting the early scientists who sought to bring order to the growing list of elements known in the 1800s. It is about one of the great adventures in the history of science: the long and continuing quest to understand what the world is made of, telling the story of some of history's most important scientists as they seek to identify, understand and organize the basic building blocks of matter.

Come at 3:30pm for refreshments, speaker at 4:00pm
